processing audio in the spectral domain has become a practical proposition for a variety of applications in computer music composition and sound design making it an area of significant interest for musicians programmers sound designers and researchers while spectral processing has been explored already from a variety of perspectives previous approaches tended to be piecemeal some dealt with signal processing

details others with a high level music technology discussion of techniques some more compositionally focused and others at music audio programming concerns as author victor lazzarini argues the existing literature has made a good footprint in the area but has failed to integrate these various approaches within spectral audio in spectral sound design a computational approach lazzarini provides an antidote spectral sound design a computational approach gives authors a set of practical tools to implement processing techniques and algorithms in a balanced way covering application aspects as well the fundamental theory that underpins them within the context of contemporary and electronic music practice the book employs a mix of python for prototyping and csound for deployment and music programming the tight integration of these three languages as well as the wide scope offered by the combination going from embedded to supercomputing and including web based and mobile applications makes it the go to resource to deal with the practical aspects of the subject

music has the potential to evoke some of our deepest emotions and drastically alter our moods simply through specific combinations of notes architecture too should have this potential this thesis aims at investigating the secret of emotion in music as it is an attempt to draw an analogy that may help to create a deeper architectural experience a great musical composition is like a dream when it is convincing in its narrative it draws you in and makes you believe in its reality stirring emotions within you for no apparent reason when you look deeper into the nature of a musical composition like musicologists have been doing you discover that testable psychological devices are applied in order to evoke greater emotional responses from listeners by studying the work of ludwig van beethoven i believe that i can translate these aural devices into visual and tactile ones in the form of a housing development in auckland city housing developments suffer from problems of monotony due to their repetitive and modular nature this project seeks to provide an alternative to these monotonous schemes by using a piece of music as a design brief highly architectural pieces of music are already perfectly balanced in their blend between variation and repetition and are therefore great for regulating order i have chosen a piece of music the pathétique sonata by ludwig van beethoven as inspiration because of its complex architecture and because there are many professional analyses of it from which to study my goal in this thesis is to reveal the wealth of architectural ideas hidden within highly structured pieces of music
